## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 16-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Serban in view of either Basham.

Regarding claim 16, Serban et al., discloses a force sensor with features of the claimed invention including a first and a second support foil arranged at a certain distance from each other by means of spacer which has recess, and electrodes and a layer of pressure sensitive material arranged in the active area of the sensor between said first and second supports such that, in response to a force, the supports are pressed together against a reaction force of the elastic support and an electrical contact is established between the at least two electrodes via said layer of pressure sensitive material. Serban does not elaborate on the nature of the support foil, however, the use of multilayer martial arrangements for this kind of force sensor is notoriously known. For example, Basham, discloses a respiration monitoring apparatus teaching the use of multi-layer support (see, for example, figure 2). It would have been obvious, therefore, for a skilled artisan at the time of the invention to modify support foils of Serban using teachings of Basham in order to provide for multi-layered configuration with layers of different materials

Art Unit: 2855

having different elastic properties for each support foil, in order to provide for more elasticity of the support.

Regarding claims 17-24, Basham teaches different layers with different properties.

Regarding claim 25-28, since terms such as "high chemical resistance" or "flame-retarding" are relative terms, the cited art reads on the claim's limitations.

Regarding claims 29-30, the layers are laminated, and can be deposited on top of each other.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
